SOFTWARE EDITION

BUSINESS SOFTWARE

SJ 71

The Software Edition's more than 600 pages introduce a new, simplified way to get the information on software programs that will do the jobs you need done. Software decisions are often difficult to reach because confusion is literally built into the system—the names of software companies are similar, the titles of programs—except for the most widely-known—are often condensed to meaninglessness. The BUSINESS AUTOMATION Software Information Service takes these confusing aspects and eliminates them. You can find what you want quickly. Often, you will discover software that you didn't know existed . . . and it may save you thousands of manhours and dollars when you can buy it instead of building it yourself.

Complete Software Information Service includes the distinctive green loose-leaf binder with tabbed sections of information up-to-date material, monthly supplements of new, updated, revised data, and HotLine reports on significant developments whenever they occur. First-year cost is only $85.00. Annual renewal is only $50.00.

What you need to know

Untangling names, titles and program details can shortcut your research time by hundreds of hours.

Abstracts of each software program detail what it is, how it is used, compatibility, interfacing potentials, as well as cost data, support information and where to call or write for action.

State-of-the-art reports keep you up to the minute on what's going on in the burgeoning world of software preparation.

Specialized software package reviews include information on file management, systems, payroll, accounts receivable, accounts payable, inventory control, production control, order entry, management aids, tax guides and many others.

Suppliers and services section gives you the cross-reference tabulations to find what you want, whether you can identify it specifically or not. Software packages are listed by name, manufacturer, function classification, language.

Indexing covers the system you use, the application you want and leads you to the available packages, with their report page numbers.

Quick-access tabbed sections

- Software package abstracts
- State-of-the-art, industry trends
- Specialized software package reviews
- Suppliers/services
- Index: applications, systems, identification
